

Construction Insurance

It is well known in the Construction industry that insurance premiums have been, and will probably continue to be affected, by the rise in liability claims resulting from our ever increasing litigious society.

Perry Appleton Risk Services Limited understand the pressure and constraints forced upon the Construction industry to meet the demands of Health & Safety regulations imposed to minimise the possibility of injury and/or damage on site.

We have worked very hard with our select panel of insurers to drive down insurance premiums where we can demonstrate on behalf of our client that the necessary procedures are in place to meet these H&S demands. This also includes providing advice to both existing and potential new clients where we perceive there to be any shortfalls in their procedures.

Our portfolio of construction clients is wide ranging, from speculative developers to all areas of the high risk sector and for both main and specialist subcontractors.

The main Contractor insurance sections of cover are:

- Employers Liability
- Public/Products Liability
- Contract Works
- Own & Hired-in Plant
